B&P Aluminum Convertible Hand Trucks

Frames are constructed with aircraft grade cherry rivets that resist loosening. Crossmembers are four-sided tube with two sides ribbed for added strength. Lock latch assembly is engineered from steel to last - One piece lock bar won't break. Simple design latch assembly with minimal moving parts for maximum reliability - Smoothest release action in the industry. Critical components are steel, not plastic for long life. Heavy duty high tensile steel axle will not bow under maximum loads. Balloon cushion caster wheels provide better rollability (wing brake standard on one wheel). Modular design allows you to customize your Liberator to your specific application.
